

Wood Frog (*Lithobates sylvaticus*) and Spotted Salamander (*Ambystoma maculatum*): Breeding Observation Datasheet

OBSERVER(S):

SPECIES (circle one): Wood Frog (*Lithobates sylvaticus*) / Spotted Salamander (*Ambystoma maculatum*)

DATE:

WEATHER CONDITIONS (include approx. temp at observation):

RAIN WITHIN 24 HRS: Yes/No

AMOUNT OF RAIN: <1 inch, 1-3 inches, > 3 inches

STATE OR PROVINCE:

COUNTY:

NAME OF SITE:

LATITUDE/LONGITUDE (or UTM) COORDINATES:

HABITAT TYPE FOR THIS OBSERVATION (circle below):

- Crossing road
- At vernal/temporary pond
- At anthropogenic or artificial wetland (borrow pit; wildlife watering hole; man-made pond; old tire-track, etc.)
- At pool in floodplain of river/stream
- Other (describe)

NATURE OF OBSERVATION (circle below):

- Adults observed en route to/from breeding site (e.g., crossing road; at drift fence)
- Adults heard or recorded calling at breeding site
- Adults observed in water at breeding site
- Adults near breeding site but not in water
- Egg masses observed at breeding site
- Larvae observed at breeding site
- Metamorphs observed leaving wetland.

Breeding pairs (Wood Frogs) or aggregates (both species) observed at breeding site (circle one): YES / NO

Number of breeding pairs or aggregates observed at breeding site (circle one): 1) one; 2) several; 3) dozens; 4) hundreds

Number of egg masses observed at breeding site (circle one): 1) several egg masses; 2) dozens; 3) hundreds

PHOTO: YES/NO
